Lumen 2.0

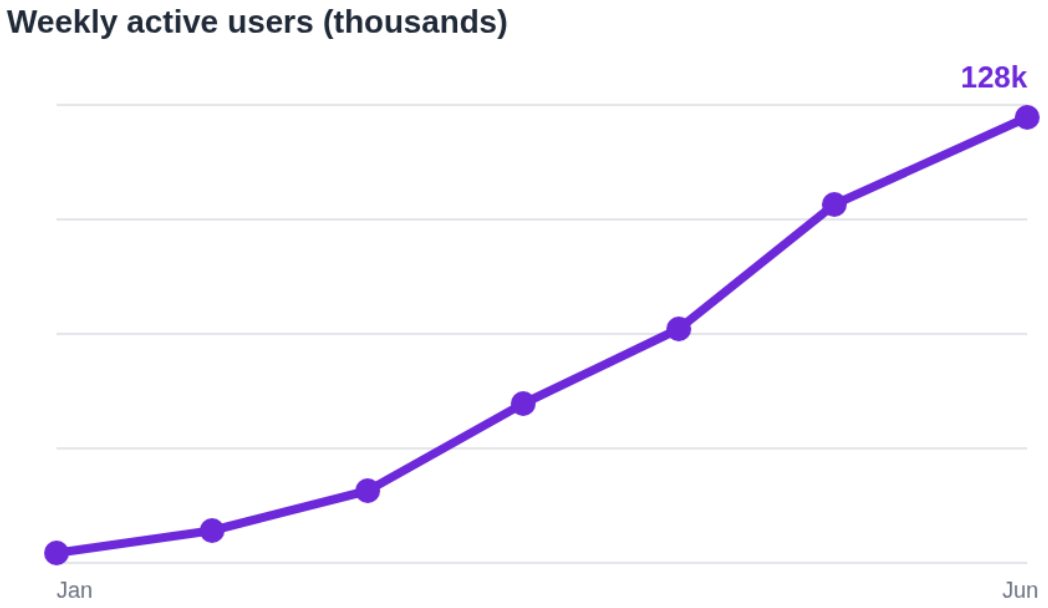

Focus, finally. Product launch briefing for the sales team

Lumen Labs · October 2026

Why now

- Remote work doubled the time people spend switching between apps.
- Teams report 40% less deep work than in 2023.
- Competitors are shipping AI features, not focus features.
- Customers told us: “just help me finish one thing”.

Weekly users doubled in six months

What drove the growth

- Focus timer launched in March
- Team plans launched in April
- Calendar sync launched in May

How Lumen works

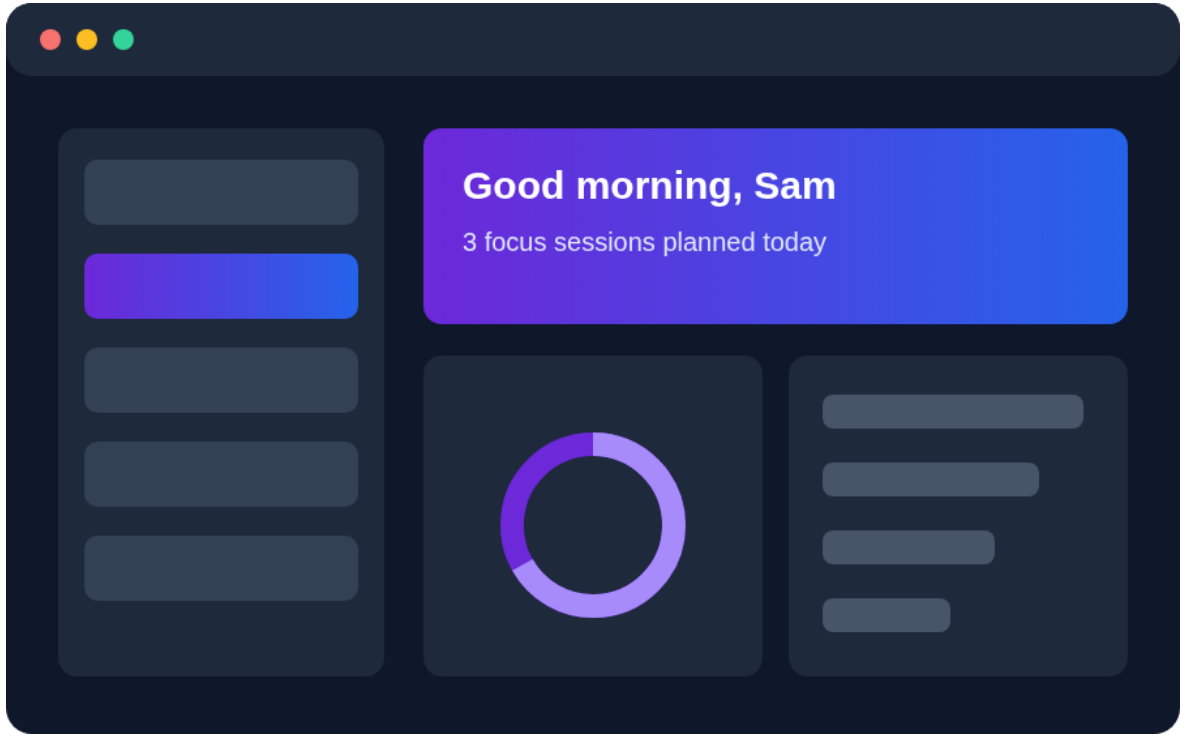

Capture

Send ideas to your inbox from any app, then triage them in a single five-minute review at the end of the day.

Plan

Pick three tasks each morning. Lumen blocks the time on your calendar and mutes everything else.

The new Today screen

What is new

- Focus rings show progress at a glance
- Dark mode on every platform
- One-tap handoff to teammates

Next steps

1. Watch the launch demo before Thursday
2. Book your customer calls
3. Share feedback in #lumen-launch
